## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 12, 13, 15-19, drawn to PRV-1 polypeptide and methods of administering same *in vitro* and *in vivo*.

Group II, claim(s) 14 and 20-22, drawn to gene therapy methods.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The special technical feature of the first Group is the structure of the PRV-1 polypeptide, corresponding to SEQ ID NO: 2. Group II does not share this special technical feature, since it is directed to a method of administering a second product, namely, the PRV-1 polynucleotide. Polypeptides and polynucleotides are materially different products, having different chemical structures and activities. The search required for the polypeptide does not necessarily define the search required for the polynucleotide. thus, the polypeptide and the polynucleotide each define a separate contribution to the art. Finally, it is noted that the PCT rules do not provide for the examination of multiple methods of using multiple products in one patent application.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
